High-tech to keep your feet comfortable...

The pioneering development of breathable membranes has revolutionised the footwear industry. These high-tech materials keep moisture out while carrying moisture from inside the shoe to the outside. However, the technology can only function properly if all parts of the system - shoes, socks and *insoles* - are coordinated with each other so that moisture is not retained but is able to evaporate easily. To achieve this, Pedag has developed its "Arctic Blue" insole. Its high-tech foam contains millions of micro-air chambers, and its characteristic construction provides a combination of unique properties, listed above.

Pedag Arctic Blue is especially suitable for heavy-duty use during cold weather, everyday use, work wear, sport and leisure wear.

GOOD for DIABETICS ...

Keeps feet warm, proven skin-friendly, hand washable and soft cushioning make Arctic Blue suitable for diabetics.
