The child's foot...

- Is especially active, the plantar arch possesses a high degree of natural resilience
- Is endowed with highly saturated subcutaneous fatty tissue which is extremely elastic
- Shows no signs of civilization damage like that caused by wearing high heels, tight shoes or activities that demand a standing position exposing the foot to undue stress

Bambini Art 192

A longitudinal arch support helps children because...

- It keeps the foot permanently in a natural, balanced position
- It actively protects the ankle joint
- It counteracts the deflection and deformation of the longitudinal arch effectively preventing the development of splayfoot

What makes Bambini a good quality footbed for children...

- The supporting material is flexible and adaptive thereby strengthening the foot's muscular apparatus
- The upper surface is made of natural, absorbent vegetable tanned leather which provides reliable hygiene, keeps the foot dry and allows the foot to breathe
- Approved by The American Podiatric Medical Association
