The Modern Foot... Rather than spending our time on soft ground, we too often find ourselves on hard floors and/or in high heels. The result: the longitudinal arch flattens, leading to so-called “splay feet”, which are extremely painful. Bunions may even form. Symptoms of this kind of change in the foot are hard skin at the front of the sole, a burning sensation at the forefoot, sensitivity to pressure, cramps and pain in the arch.

Metatarsal pads by Pedag provide effective relief. They support the forefoot and hold the bones of the middle part of the foot in the correct position.

Pedag “Met Pads”

- For Splayed Flat Feet
- Able to fit in almost any shoe
- Made of vegetable tanned sheepskin
